THINKING

COMBIWALL®

**CREATING
SPACES.**

CREATING SPACES.

For us it is not about building walls. It is about creating the perfect space and framework for your everyday life.

This is the essence of Combiwall – a wall system, that creates space for you to express yourself and not least flexibility to always change with your needs.

TORVEHALLERNE.

It all started here – at Torvehallerne in Copenhagen – with a “simple” desire from our client to create an ultra flexible wall system for Copenhagen’s most beautiful market place. This is why it is part of Combiwalls DNA and our products are a reflection of the challenge we faced in the design back then.

Later on this simple yet elegant starting point has given us a unique wall system, that is far more flexible than most wall systems on the market today.

OFFICE CUBES

COLOURS.

For us a wall is much more than just a simple way to structure and divide a space. If the design is right a wall will create the space and natural frame for everyday life. Therefore the choice of colour is a significant factor, as it creates the atmosphere together with the rest of the decor. This helps to create the perfect conditions for our customers to express themselves afterwards.

We therefore offer a wide ranging color palette for our aluminum frames. Amongst others, you can choose between a wide range of different anodizing/tones by which our clients get to be a part of putting their personal touch to the spaces that creates the framework around their activities.

FLEXIBILITY.

There is no escaping the fact that we are Danes, when you look at the simplicity in the way that a Combiwall is assembled. We have stripped all but the absolute necessary so the wall itself isn't "imposing" but instead creates a frame to thrive in because it's simple elegance is a compliment to the rest of the rooms décor.

The simplicity of the system contains a lot more than what you can see. The number of combinations are numerous and it is this possibility of flexibility in our system that allows us to work with just one product line. The main design has the function of numerous options allowing all requirements to be met. Thereby allowing Combiwall to be used in far greater enterprises than what is usual with this type of system. Thus creating a unique uniformity in these projects.

REVIT.

"Show it don't tell it" – or even better- use it in your planning. To give you a better understanding of our unique wall system and the combinations available to you, we have made a REVIT file (Combiwall Revit curtain wall).

As an architect/ and/or interior designer this allows you to easily test our wall in your new project settings where you require custom- and glass walls.

The file works together with: Revit family generally
And works with: Revit, BIM, Autodesk, 3D CAD and CAD.

THE LUXURY OF
CRAFTSMANSHIP.

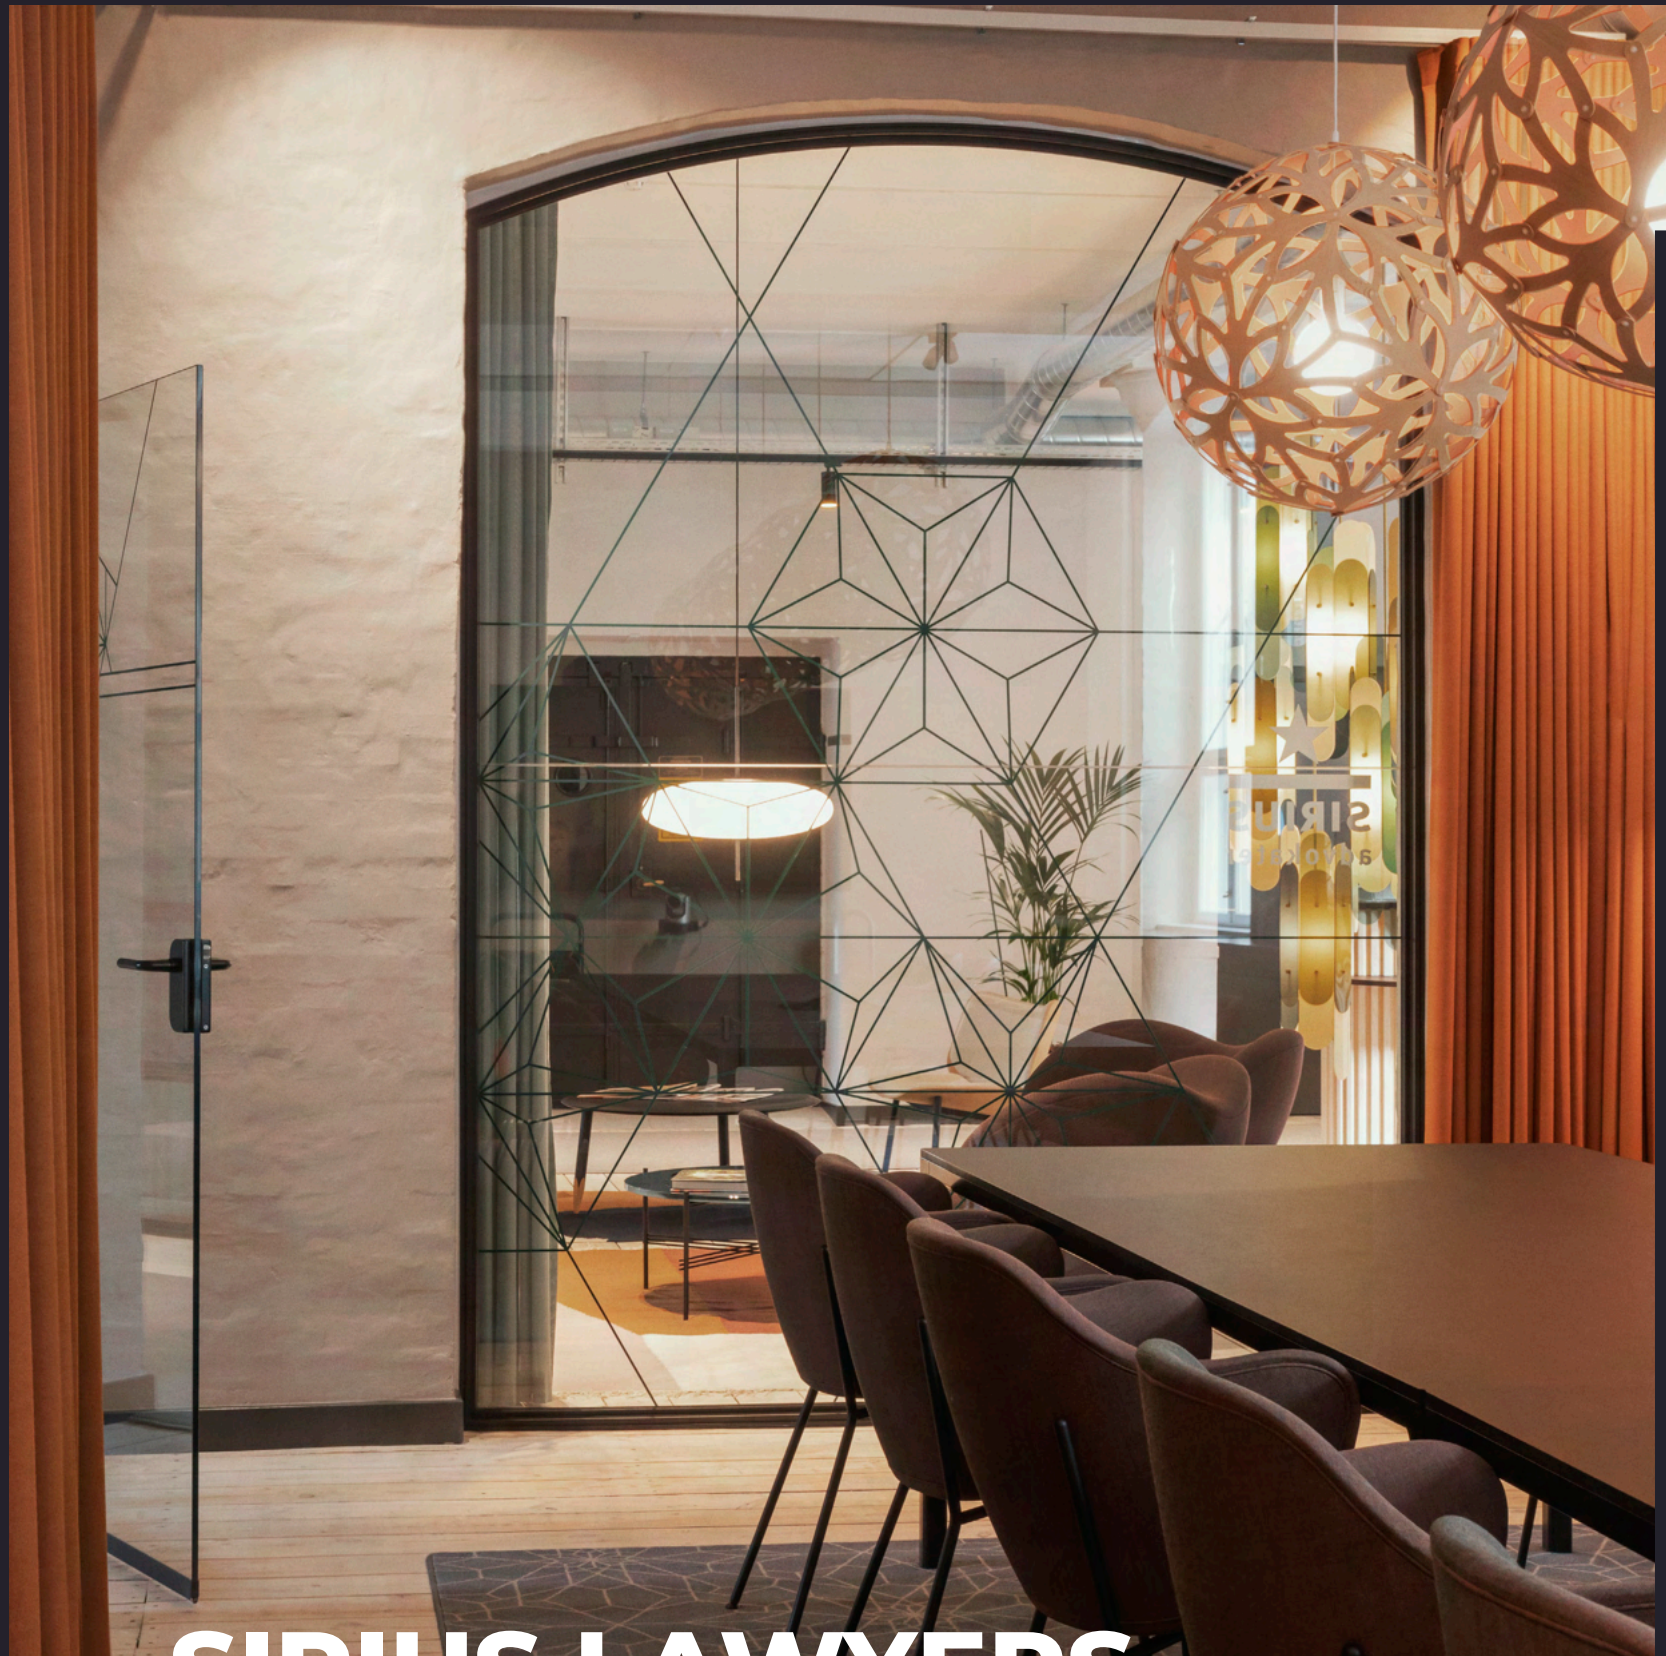

PATENTED.

Get a simple and perfected design, that easily and simply meets your needs now and in the future.

Whether it is the need to expand your fleet size or just the need for a quick move in and out of large inventory in the middle of a busy production area – Combiwalls flexibility is what you are looking for.

Where a wall normally is considered a permanent inventory, with Combiwall you can dismiss that image. With our patented solution it is possible to quickly dismantle a part of the wall if a need should arise. For example if a door between to offices is needed. You can also easily integrate for example a whiteboard in the wall or open the wall up completely if you should, lets say move a large part of machinery.

SOUNDBOKS ESROMGADE.

SOUND.

The need for quiet in the office or sound proofing of the meeting room is naturally part of our solution. Our wall system is delivered with 40 or 42 db sound glass and our doors are delivered with at least 12mm tempered glass (min 33 db sound proofing). All tested in a lab at Delta/Force Technology.

DOOR.

With our door system we are able to offer a solution that does not compromise the design of the wall and which is an integrated part of the actual wall frame.

Our door is designed in a sleek and coherent design and our door frame does not take up more than 6 mm (doorframe and profil=28mm in total). Furthermore it can be delivered in variable heights – up to 2,5 m and all components (like door handles, locking mechanisms, hinges, down lists etc) are of course dyed (standard black or nature) to always look a part of the wall.

The doors can also be delivered as a specialized door with striker plate and electronic locking system. Finally we always have 4 hinges on our doors to secure a stable and solid product/function.

LØGISMOSE TOLDBODEN.

MOUNTING.

Not only do we deliver an outstanding and flexible wall system, we are also part of the entire process from beginning to end and we make sure our walls are mounted correctly. This is your security, that the quality is high all the way through the process and not least, the finished product.

SILENCING SPACES.

We all need places in our workspace where we can be alone sometimes to increase efficiency but at the same time we don't want to lose the unique energy that is an office space.

With its light expression and open frame our BOX creates a space where we can be alone and undisturbed but at the same time keep us connected to others.

Can be purchased and leased

MEASUREMENT.

OUTER MEASUREMENT (HxWxD)
2300mm x 1050mm x 1050mm

INNER MEASUREMENT (HxWxD)
2100mm x 950mm x 950mm

SHELF (BxWxD)
800mm x 250mm x 20mm

GLASS.

DOOR & SIDE GLASS
40DB soundproof glass

BACKWALL.

FILLING
Acoustics panel from Woodupp
(rustic oak grey)

ELECTRONIC.

OUTPUT
1 x USB, 1 x 220V

CLIMATE
Specially designed light source
Soundproof ventilation
Sensor for auto. light and ventilation

DOUBLE UP.

No matter if it is our wall, phone box or our movable wall partition the fundamentals of everything we build and develop is the patented Combiwall profile.

This unique set up makes it possible for one and the same profile to encompass the simple glass wall but also the more complex double wall. With the double wall as part of your space you get a whole host of possibilities when it comes to the expression, the set up, the elements and the soundproofing,

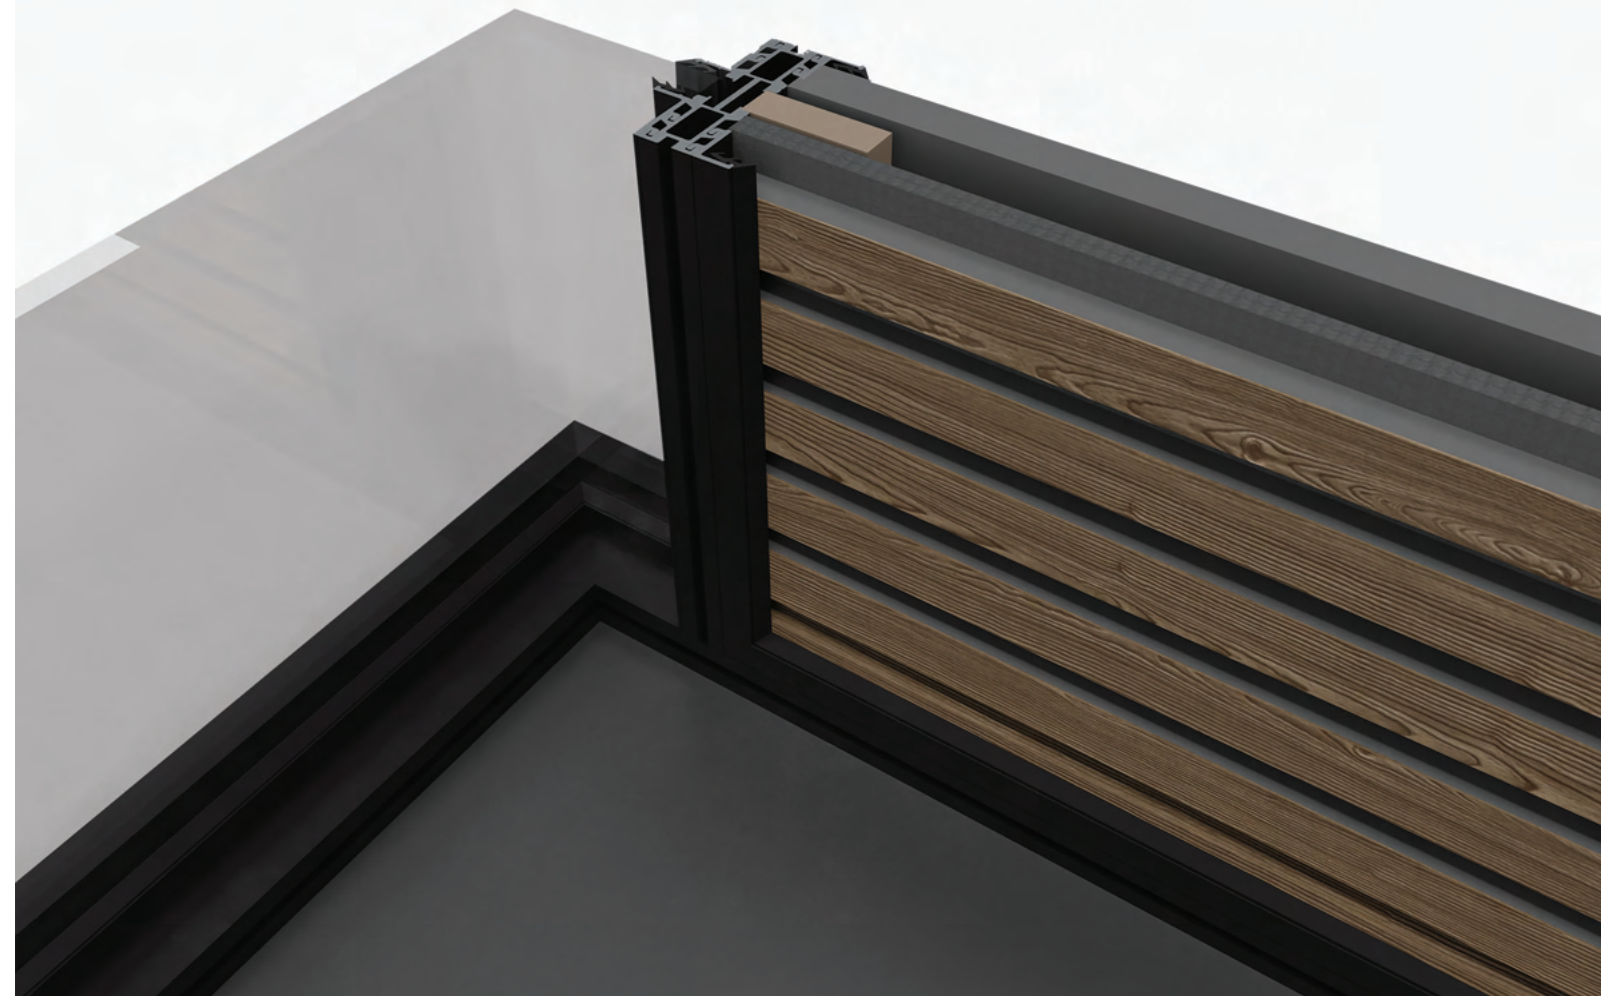

Our unique opportunity to combine different wall types in one makes not a neither nor when it comes to decisions on how to divide the space.

Integrate the whiteboard directly into the wall, presentations screen, soundproofing and other elements that you would usually have to do without when you want a classic glass wall is all possible with the Combiwall profile.

CALM DOWN.

We have designed our box with it's light expression and glass sides with a focus on the box fitting in with the already existing space. Likewise the flexibility is an important parameter for us which is why we have made it easy to move the box depending on where it is needed.

All aspects of the box has been developed with a focus on functionality and comfort in mind. Ventilation, acoustics, furnishings, electronic and the possibility to customize further creates the best possible setting for a phone call. The soundproofing ensure that important calls and meetings can be held in complete silence while the box's glass sides make it "social" and open. The best from the open office space and the advantages of the private office all in one.

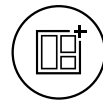

IT'S ALL ABOUT [RE]THINKING.

With the Combiwall you not only get a unique wall system. You also and most importantly get a solution that can work for you whenever changes and new needs occur. A solution that makes it possible to be ready to change with the company and meet whatever need you should have whether it be an office, meeting room or fleet storage. The expansion, redecorating or rebuilding of any space can be met by the Combiwall system.

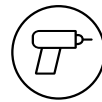

Combiwall gives you the flexibility to make new decisions for your company's physical framework without it necessarily being a big expensive or massive undertaking. The system is built so it can be reused in a new location should you need to. Finally the sustainability is top of the class as everything in the wall system can be repurposed if it isn't reused.
